

EXPOZOM allows you to test your exposure to pesticides with a hair analysis.

Several levels of analysis are available depending on the number of pesticides analyzed. The molecules have been selected on the one hand on toxicity criteria:

- Carcinogenic
- Mutagenic
- Reprotoxic
- Neurotoxic
- Endocrine disruptor

And on the other hand on the frequencies of detection in the hair from the scientific literature and internal data.

These substances are considered by the national and international health authorities to be of concern for human health and belong to the families

- Pesticides
- Biocides;
- Persistent organic pollutants (POPs);

The pollutants are analyzed and quantified in the laboratory by experts using state-of-the-art technologies.
